## Snapshots

The screenshot displays the Microsoft Azure portal's Azure Resource Graph Explorer. The browser address bar shows the URL: `portal.azure.com/#view/HubsExtension/ArgQueryBlade/query/%2F%2F%20Run%20query%20to%20...`. The page header includes the Microsoft Azure logo and a search bar. The left sidebar shows the 'Categories' view with a search bar and a list of categories: General, AI + machine learning, Analytics, Compute, Containers, Databases, DevOps, Hybrid + multcloud, and Identity. The main area is titled 'Azure Resource Graph Explorer' and contains a query editor. The query is as follows:

```
79 spotEvictionPolicy = case(
80   (properties.priority =~ "Low" or properties.priority =~ "Spot") and properties.evictionPolicy
81   (properties.priority =~ "Low" or properties.priority =~ "Spot"), 'Delete',
82   '._'
83 ),
```

Below the query editor, the 'Results' tab is active, showing a table with one result. The table headers are: name, typeDisplayName, subscriptionDispl..., Resource group, locationDisplayN..., status, and os. The results section indicates 'Results: 1 (Duration: 00:01.231)'. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 2:44 PM on 4/23/2023.

## Create SQL Database Server

Microsoft

### Authentication

Select your preferred authentication methods for accessing this server. Create a server admin login and password to access your server with SQL authentication, select only Azure AD authentication [Learn more](#) or using an existing Azure user, group, or application as Azure AD admin [Learn more](#), or select both SQL and Azure AD authentication.

Authentication method

- ☒ Use only Azure Active Directory (Azure AD) authentication
- ☐ Use both SQL and Azure AD authentication
- ☐ Use SQL authentication

Set Azure AD admin \*

**Not Selected**  
[Set admin](#)

✖ The value must not be empty.

OK
